LOVIS EOS

If you can simplify the running of your business, you will increase its productivity, profitability and well-being.

Current enterprise software – from the data input systems of the 70s to the modular function-based tools of the 90s – is still in use today. In a bid to plug this software’s process gaps, organisations have become increasingly reliant on spreadsheets and other mechanisms to deliver integrated, continual, beginning-to-end process support. But as business complexities increase, so too does the need for a new software system. LOVIS Enterprise Operating System (EOS).

The need

Any organisation that runs and creates data, making decisions every minute of every day, should have the best technology, ensuring operational work flows are continually supported in an integrated and synchronised way. The system should also create and store detailed data, reflecting business operations in real-time, giving users access to instant and reliable information. Does your system offer this level of support?

The problem

Many enterprise software systems have failed to deliver. Investing time, effort and money to customise existing software creates uncertainty, relies on old practices and causes potential growth barriers. Building solutions around different modules or products that should be integrally connected leads to data silos and data-sharing interfaces. Operations are also disrupted by monthly closedown procedures and infrastructure maintenance, resulting in users turning to emails and spreadsheets to fill the gaps.

Making an informed decision is difficult when unreliable data is scattered across an organisation.

The innovation

The answer? Fully configurable, continuously available, transactional and systemic enterprise software that not only reflects operational activity in real-time but evolves in line with your business. Having been told “This is impossible,” LOVIS remembered the words of Henry Ford “Nothing is impossible, just no one has done it yet” and took up the challenge.

The solution

A new dawn in the world of enterprise software – the Enterprise Operating System.

With every organisation built around business processes and every process created by individual interconnected transactions, the solution is to allow every user to perform every transaction, at anytime, anywhere directly on LOVIS EOS. The event data is created when the tasks are executed, by the people making them happen. And with accounting being the common language for stakeholders, the system automatically builds it, drawing upon transactional data created by business teams.

“EOS is the alternative to ERP and pre-condition for Enterprise 4.0”

Youssef, Zacharewicz & Chen
Bordeaux University, IEEE 2016, Paris
All you need
Configurable, scalable and evolutionary, LOVIS EOS completely adapts to your organisation in a matter of weeks and fully deploys within six months. Customised using business parameters, it supports every business process and its variations, there’s no operational disruption at go-live and the system is ready for future challenges.

Forever
With an easy to use, continuous, transactional and collaborative workflow, LOVIS EOS integrates data in real-time, instantly creating detailed and aggregated data. Teams can access timely and reliable information that reflects ongoing operations, helping them make their best decisions. The system eliminates monthly closing procedures and the resultant disruptions, allowing businesses to run smoothly and achieve further success.

Easy
Assigning new roles and profiles is fast and easy with automatic data access and workflow updates, improving security, communication and collaboration. Every task is preconfigured to minimise human effort and maximise data quality. Every transaction is created using business terms. All transactions are converted into their accounting equivalents, delivering instant operational and financial reports and statements.

In the air
A native of the cloud, the system is secure and accessible from any device, anywhere with military-grade security. Users only need a PC, Mac, tablet or smartphone. Built and run for organisations, LOVIS EOS enables you to focus on and create greater agility for your business.

The answer
LOVIS EOS includes hundreds of queries, reports and Business Intelligence (BI) tools, which dependent on their security profile, can be run, customised, or new ones created, by end-users. When asked, LOVIS Assistant tells you how your organisation is performing in real-time; a function that will leave your competitors speechless.

LOVIS EOS initiates any new period from day one, without having to close the previous one

Fair
Clear, transparent pricing with no surprises. The monthly rent for simultaneous sessions – with options for small, medium, large and global enterprises – includes everything you need for the size and scope of your organisation. Just bring your Internet connected device.

“Happy to have a powerful platform that is flexible to all changes (sometimes radical ones) in our organisation. LOVIS has adapted fully to the DNA of ZX Ventures in which innovation and solutions to complex needs are fundamental without losing control.”

Narda Hernández, Comptroller, ZX Ventures
ABInBev Innovation and Growth Group

Simplicity
Simplicity is our mantra. LOVIS EOS simplifies the running of your business, improving productivity, profitability and wellbeing. Using a flexible digital-human Kanban, the system enables team members to get the job done, without the frustration caused by disparate enterprise software that’s reliant on spreadsheets and email.

For you
LOVIS EOS delivers a long-term increase in productivity of up to 100%, and a 2:1 annual return on investment from year two. It is the solution you and your team have been looking for.

99.9%+
24/7 Annual Transactional Availability
The scope
A nervous system that connects all of an organisation’s functions in real-time. It has a multi-currency, multi-language and multi-country DNA, giving it global capabilities, yet with a simple configuration and operation.

Workflow and security
Workflow is the backbone of LOVIS EOS.

Take trigger transactions, such as orders, requisitions, expenses, bills and cash advances, your team will know what’s next and complete the tasks in a few clicks, improving your business workflow. Each transaction is created as the event is happening and every step can be reversed with a single click, allowing users to easily correct mistakes and build clean data.

Functional and geographical roles allow user profiles to be built in a matter of minutes and there are options to restrict item use (products, components, ingredients etc) and entity access (providers, clients, warehouses, production lines etc), enhancing security. Vendor and customer profiles can also be created, giving them secure access, building a more efficient extended value chain.

Supply chain
With the supply chain at the core of your organisation, LOVIS EOS gives it the strength you need. It supports procurement, inventory, manufacturing, maintenance, sales and distribution of products, components, ingredients, derivatives, services and fixed assets, plus all the variations of procurement-to-pay, sales-to-collect and other business processes, in an integrated, streamlined and flexible way.

Finance
Finance is the oxygen of your organisation, so LOVIS EOS takes great care of it. It supports: billing, receivables, expenses, payables, treasury, investments and banks, and logs financial transactions that reflect supply chain events. It maximises organisational flow while keeping strict control, facilitating operational and financial audits, building reliable information.

Accounting
LOVIS EOS builds the accounting for you; supplying regional, national and global financial reports that reflect your current business situation when required (for the board, shareholders, investors, creditors, the government and public).

Every transaction is translated into its accounting equivalent, with 3D accounting charts easily customised. Project accounting reports and financial statements for business lines, business centres and divisions are updated every morning.

Integration
Integration supports the circulation of the LOVIS EOS network. LOVIS EOS connects with B2B and B2C e-commerce portals, CRM, ERP, POS, BI, analytics, billing, and any other application integral to the running of your business. Your IT team can work with ours to get the best from our Application Programming Interfaces (APIs).

Business intelligence and reporting
Business intelligence is the brain of LOVIS EOS. It gives access to dynamic analytics, powerful reports and sophisticated queries that in turn support decision making, measure performance and ensure results are reported accurately.

LOVIS Assistant
LOVIS Assistant is the voice of LOVIS EOS. Developed to deliver valuable insights into your organisation’s performance, just ask and LOVIS Assistant will answer with reliable data, reflecting your real-time operational status.

Simplicity is the Mantra of LOVIS EOS
Tell us a problem your current enterprise software cannot solve, and, in a few weeks, we will show you how LOVIS EOS solves it.

Our promise
- Implement LOVIS EOS within six months with no disruptions.
- Fully configurable for today and tomorrow
- Integrated, continuous and collaborative beginning-to-end business processes
- Run your organisation 24/7 @ 99.9%+ on the cloud with <1/7 carbon footprint.
- LOVIS EOS tells you exactly how your organisation is performing in real-time.
- Reduce total effort by half.
- Obtain a 2:1 ROI.

Annual ROI of 2:1 from year two

Clients

LOVIS is the creator of the Enterprise Operating System (EOS).
Our mission is to provide powerful and simple solutions to complex enterprise problems through LOVIS EOS, the integrated, secure and reliable enterprise software platform on the cloud that is adaptive, easy to use and fast to implement. LOVIS EOS saves money, recovers time and hence, makes people happy.
We enable businesses to see where they are and reach where they want to go.
